

AGIL ShippingIntegration

# Shipping with ease manage.

The AGIL ShippingIntegration solution is your key to integrating shipping service providers into your digital warehouse outbound logistics. By simply selecting the shipping service provider and shipping method, your entire external delivery runs automatically. From the start of the shipping process when the delivery note is created to the automatic creation of the shipping label - all data is determined using customer data, customer order and shipping configuration. The customisable shipping label is created internally or by the shipping service provider for the shipping unit. Customers can optionally be informed of the delivery status by tracking number.

#### WORKS WITH

SAP S/4HANA Enterprise Management

SAP S/4HANA Cloud Public Edition

SAP BTP, Cloud Foundry runtime and environment

SAP HANA Cloud

SAP Integration Suite

SAP ERP

#### SOLUTION TYPES

Extensions and Add-ons

#### CATEGORY

Enterprise Resource Planning

BENEFITS

Digitalise your shipping process

Use your ERP data to automate your shipping process with your shipping service providers. Gain flexibility in your shipping process and when generating shipping labels.

Support your multichannel strategy

The integration of multiple shipping service providers and the integration of different shops is flexible. The integrated shops can be either company-owned shops or third-party shops

Customer experience at the centre

Stop wasting time with manual data transfers. Use the time for even better customer service, automatically notify your customers about the shipment and enable individual shipment tracking.

Profit quickly and easy.

The solution is available either as a SaaS solution from AGILITA or as a software package on your SAP Cloud Platform. Hardware, long implementation times and interface monitoring are not required.

FUNCTIONS

Optimise your shipping process

When creating the sales order, select how the dispatch should take place. The dispatch label is automatically generated and printed when the delivery note is created.

Manage your shipments

The shipping cockpit gives you an overview of your shipping labels at all times, allows you to create new labels, freeze and document the shipping status.

Create at any time shipping label

Shipping labels can be generated directly in your system at any time as required. No more tedious logging in to your various dispatch service providers.

Cover specific requirements

Thanks to our architecture, which provides integration content on AGILITA's SaaS as well as your integration platform, field definitions of individual shipping service providers can be customised to best meet your requirements.
